Akash Prajapati

Full-Stack Developer | Python, Django, React Native & Applied AI

Mumbai, Maharashtra, India | +91-8356886969 | akash.p8869@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Full-Stack Developer with 3.4+ years of experience building enterprise web, mobile, backend and AI-powered applications using Python, Django, Django REST Framework, FastAPI, React Native and JavaScript. Experienced in developing REST APIs, microservices, reusable UI components, frontend state management, database optimization and third-party integrations. Hands-on experience implementing Applied AI solutions, including RAG pipelines, LLM integrations, semantic search, image embeddings and AI-assisted code analysis.

TECHNICAL SKILLS

Programming & Backend: Python, SQL, Django, Django REST Framework, FastAPI, REST APIs, Microservices

Applied AI & GenAI: LLMs, RAG, Prompt Engineering, LangChain, LangGraph, Tool Calling, OpenAI APIs, Semantic Retrieval, Image Embeddings, Sentence Transformers, ChromaDB, Whisper, ElevenLabs, Guardrails, LLM Harnessing, LLM Evaluation, LangSmith

Databases & Messaging: PostgreSQL, Redis, Django ORM, Celery, Apache Kafka

Authentication & Integrations: Keycloak, JWT, OAuth 2.0, OTP Verification, Payment Gateway Integration, Third-Party API Integration, RBAC

Concepts: OOP, Database Design, Query Optimization, Agile Methodology, System Design

Cloud & Tools: AWS (S3, RDS, EC2, ELB), Docker, Kubernetes (Fundamentals), Grafana, Git, GitHub, Swagger/OpenAPI

PROFESSIONAL EXPERIENCE

Vishleshan Software Solutions Pvt. Ltd. | Software Developer 25th November 2025 – 24th September 2026

- Developed enterprise e-commerce workflows using Python, Django, DRF and AWS RDS PostgreSQL, contributing to 100+ REST APIs supporting 1,000+ daily orders; integrated DSR/MSR, Shiprocket and SAP Grow workflows.
- Implemented Smart Search using separate image and text embedding pipelines, enabling product discovery through images, part numbers, product names, categories and voice queries, returning the top five similarity-based results.
- Developed FastAPI notification services integrated with Apache Kafka, supporting approximately 1,000–10,000 notifications daily through event-driven processing.
- Implemented Redis caching for Order History APIs and optimized Django ORM queries to reduce repeated database access and improve response times.
- Built asynchronous report generation and export workflows using Celery and Redis, integrating AWS S3 for file storage and secure presigned downloads.
- Developed DSR/MSR field-representative workflows and integrated Shiprocket for shipment creation and tracking, and SAP Grow with internal backend services.
- Developed backend APIs and an end-to-end RAG pipeline using Python and Django to deliver context-grounded responses from a product knowledge base.
- Implemented document processing and recursive chunking (500 words per chunk, 20-word overlap), generated embeddings using Sentence Transformers and stored approximately 100–500 knowledge-base items in ChromaDB.
- Built semantic retrieval using cosine similarity and dynamic thresholding, with LangGraph conditional workflows for retrieval, response generation, query rephrasing and fallback handling.
- Integrated Whisper, GPT-4 and ElevenLabs APIs for speech-to-text, response generation and text-to-speech for a Hindi voice-enabled AI assistant.
- Implemented LLM safety controls, including PII redaction, structured output validation and prompt injection detection; integrated LangSmith for execution tracing, debugging and monitoring workflow latency and token usage.
- Evaluated approximately 5,000 test cases against expected answers using LLM-based evaluation, achieving an average reported evaluation score of approximately 87%.
- Integrated Keycloak authentication APIs using JWT and OAuth 2.0, implemented CAPTCHA validation and supported backend maintenance and production issue resolution.

Sankey Solutions | Solution Analyst 1st June 2023 – 14th November 2025

- Managed and contributed to approximately 18 interconnected microservices built using Python, Django and PostgreSQL on AWS RDS, supporting vehicle management, fleet operations, subscriptions and payment workflows.
- Developed backend features across vehicle, wrapper, subscription and payment services within an approximately 18-microservice fleet management platform using Python, Django and PostgreSQL.
- Developed 30+ mobile screens and 50+ reusable React Native components, improving UI reusability, reducing code redundancy and enhancing application usability.
- Implemented Redux for application state management and used React Native Hooks, including useEffect, useMemo, useCallback and useLayoutEffect, to manage component lifecycle and optimize rendering.

- Managed frontend-backend communication using Axios and Promises, including API integrations, request/response handling and interceptors.
- Integrated Fleeca SDK and implemented mobile permissions, maps, charts, tooltips and key application modules; developed Mileage Saarathi and Driving Scorecard mobile modules for driving insights, vehicle performance metrics and real-time tracking.
- Upgraded React Native from 0.68.1 to 0.70.1, resolving dependency conflicts and Android/iOS compatibility issues.
- Built the Vehicle Day-wise Tracker backend, processing historical GPS coordinates, calculating distances using the Haversine formula, identifying trips and stops, and preparing route data for Google Maps visualization.
- Improved backend API performance by approximately 20–30% by resolving N+1 query issues and optimizing database access using Django ORM Subquery and related query optimizations.
- Implemented role- and subscription-based access controls, managing Fleet Owner and Fleet Manager permissions, site-level vehicle visibility and plan-based access; developed vehicle subscription workflows for purchases, upgrades, renewals and expiry.
- Integrated CCAvenue payment gateway with request encryption, response decryption, payment callbacks, status updates, subscription synchronization and Redis cache updates.
- Designed and developed an IQMS quality-management backend using Python, Django and PostgreSQL, including database design and 50+ REST APIs to digitize vehicle assembly-line inspections, defect reporting and corrective-action workflows.
- Implemented Quality Maker and Checker workflows and developed an Apache Kafka consumer to receive VIN and vehicle information from manufacturing sites and persist incoming data in PostgreSQL; integrated Swagger/OpenAPI documentation.
- Independently developed an AI-assisted Git repository analysis solution integrating GitHub APIs to retrieve commit differences and surrounding code context.
- Implemented separate OpenAI API workflows for code-change summarization and potential security vulnerability detection, generating structured reports with issue descriptions and severity levels.
- Developed security checks to identify exposed API keys, access tokens, passwords, email credentials and AWS access details.

EDUCATION

Bachelor of Engineering — Computer Engineering
Smt. Indira Gandhi Engineering College, University of Mumbai | Aug 2019 – Jun 2023 | CGPA: 8.88/10

ACHIEVEMENTS

- **Shining Star:** Recognized for outstanding technical contributions.
- **Bar Raiser:** Recognized for problem-solving, technical guidance, and supporting team members.

CERTIFICATIONS

- Machine Learning with Google Cloud
- Android Development

PUBLICATION

- Crop Protection Against Birds Using Deep Learning and IoT, IRJET, Vol. 10, Issue 4, April 2023.
